

- 11** In a particular year, 12 000 units of a good are sold at \$1 per unit. In a later year, 14 000 units are sold at \$1.20 per unit.

If consumer tastes have remained constant, what could account for the change between the two years?

- A** a decrease in the price of raw materials used by producers
- B** an increase in the price of a substitute good
- C** an increase in the rate of tax imposed on producers
- D** the formation of a monopoly in the production of the good

- 12** The diagram shows demand and supply curves for petrol (gas). The initial equilibrium is at X.

What could be the new equilibrium if there were a large fall in the price of cars?
