

- 28** Light of a single wavelength is incident normally on a diffraction grating.

The resulting diffraction pattern is displayed on a screen.

Which change makes the first orders of intensity maxima further apart from each other on the screen?

- A** placing the screen closer to the diffraction grating
 - B** using a diffraction grating with less separation between adjacent slits
 - C** using a diffraction grating with more slits but keeping the same separation between adjacent slits
 - D** using light with a shorter wavelength
- 29** For a current-carrying wire, the current can be calculated using the equation shown.

$$I = Anvq$$

What is the meaning of n ?

- A** the number of charge carriers in the wire
 - B** the number of charge carriers multiplied by the volume of the wire
 - C** the number of charge carriers per unit length of the wire
 - D** the number of charge carriers per unit volume of the wire
- 30** The number of free electrons passing a point in a wire in 24 hours is 6.0×10^{23} .

What is the average current in the wire?

- A** 6.3 pA **B** 1.1 A **C** 67 A **D** 4.0 kA
