

- 24 The Young modulus of steel is determined using a length of steel wire and is found to have the value E .

Another experiment is carried out using a wire of the same steel, but of twice the length and half the diameter.

What value is obtained for the Young modulus in the second experiment?

- A $\frac{1}{4}E$ B $\frac{1}{2}E$ C E D $2E$

- 25 The graph shows how the height of a water surface at a point in a harbour varies with time t as waves pass the point.

What are p and q ?

	p	q
A	displacement	wavelength
B	displacement	period
C	amplitude	wavelength
D	amplitude	period

- 26 The intensity I of a sound at a point P is inversely proportional to the square of the distance x of P from the source of the sound. That is

$$I \propto \frac{1}{x^2}.$$

Air molecules at P, a distance r from S, oscillate with amplitude $8.0\mu\text{m}$.

Point Q is situated a distance $2r$ from S.

What is the amplitude of oscillation of air molecules at Q?

- A $1.4\mu\text{m}$ B $2.0\mu\text{m}$ C $2.8\mu\text{m}$ D $4.0\mu\text{m}$
