

- 8** The points  $A$ ,  $B$ ,  $C$  and  $D$  have position vectors  $3\mathbf{i} + 2\mathbf{k}$ ,  $2\mathbf{i} - 2\mathbf{j} + 5\mathbf{k}$ ,  $2\mathbf{j} + 7\mathbf{k}$  and  $-2\mathbf{i} + 10\mathbf{j} + 7\mathbf{k}$  respectively.
- (i) Use a scalar product to show that  $BA$  and  $BC$  are perpendicular. [4]
- (ii) Show that  $BC$  and  $AD$  are parallel and find the ratio of the length of  $BC$  to the length of  $AD$ . [4]
