

- 19 The total energy input E_{in} in a process is partly transferred to useful energy output U , and partly to energy that is wasted W .

What is the efficiency of the process?

- A $\frac{U}{W} \times 100\%$
- B $\frac{W}{E_{\text{in}}} \times 100\%$
- C $\frac{U}{E_{\text{in}}} \times 100\%$
- D $\frac{U+W}{E_{\text{in}}} \times 100\%$

- 20 Why does an ideal gas exert pressure on its container?

- A The molecules of the gas collide continually with each other.
- B The molecules of the gas collide continually with the walls of the container.
- C The molecules of the gas collide inelastically with the walls of the container.
- D The weight of the molecules exerts a force on the walls of the container.

- 21 The formula for hydrostatic pressure is $p = \rho gh$.

Which equation, or principle of physics, is used in the derivation of this formula?

- A density = mass \div volume
- B potential energy = mgh
- C atmospheric pressure decreases with height
- D density increases with depth
