

- 13 In a large container in an oil refinery, three oils of different densities are mixed. No chemical activity occurs.

The mixture consists of

1200 kg of oil of density 1100 kg m^{-3} ,

1500 kg of oil of density 860 kg m^{-3} ,

4000 kg of oil of density 910 kg m^{-3} .

What is the density of the mixture?

- A 927 kg m^{-3} B 957 kg m^{-3} C 1010 kg m^{-3} D 1080 kg m^{-3}

- 14 Two coplanar forces act on the rim of a wheel. The forces are equal in magnitude.

Which arrangement of forces provides only a couple?

- 15 The density of air on the Earth decreases almost linearly with height from 1.22 kg m^{-3} at sea level to 0.74 kg m^{-3} at an altitude of 5000 m.

Atmospheric pressure at the Earth's surface on a particular day is $100\,000 \text{ Pa}$. The value of g between the Earth's surface and an altitude of 5000 m can be considered to have a constant value of 9.7 m s^{-2} .

What will be the atmospheric pressure at an altitude of 5000 m?

- A $36\,000 \text{ Pa}$ B $48\,000 \text{ Pa}$ C $52\,000 \text{ Pa}$ D $59\,000 \text{ Pa}$

- 16 A parachutist is falling at constant (terminal) velocity.

Which statement is **not** correct?

- A Gravitational potential energy is converted into kinetic energy of the air.
B Gravitational potential energy is converted into kinetic energy of the parachutist.
C Gravitational potential energy is converted into thermal energy of the air.
D Gravitational potential energy is converted into thermal energy of the parachutist.
