

- 13 A solid sphere falls at constant (terminal) velocity in a liquid. The three forces acting on the sphere are shown in the diagram.

How are the three forces related?

- A $W + D = U$
 - B $W > U + D$
 - C $W - U = D$
 - D $W < D + U$
- 14 A thin horizontal plate of area 0.036 m^2 is beneath the surface of a liquid of density 930 kg m^{-3} . The force on one side of the plate due to the pressure of the liquid is 290 N .

What is the depth of the plate beneath the surface of the liquid?

- A 0.88 m
 - B 1.1 m
 - C 1.8 m
 - D 8.7 m
- 15 A ball is thrown vertically upwards. Air resistance is negligible.

Which statement is correct?

- A By the principle of conservation of energy, the total energy of the ball is constant throughout its motion.
- B By the principle of conservation of momentum, the momentum of the ball is constant throughout its motion.
- C The kinetic energy of the ball is greatest at the greatest height attained.
- D The potential energy of the ball increases at a constant rate during its ascent.
