

- 30 In a uniform electric field, which statement is correct?
- A All charged particles experience the same force.
 - B All charged particles move with the same velocity.
 - C All electric field lines are directed towards positive charges.
 - D All electric field lines are parallel.
- 31 Which of the following describes the electric potential difference between two points in a wire that carries a current?
- A the force required to move a unit positive charge between the points
 - B the ratio of the energy dissipated between the points to the current
 - C the ratio of the power dissipated between the points to the current
 - D the ratio of the power dissipated between the points to the charge moved
- 32 The diagram shows four heaters and the current in each.

Which heater has the greatest power dissipation?

- 33 When a potential difference V is applied between the ends of a wire of diameter d and length l , the current in the wire is I .

What is the current when a potential difference of $2V$ is applied between the ends of a wire of the same material of diameter $2d$ and the length $2l$? Assume that the temperature of the wire remains constant.

- A I
- B $2I$
- C $4I$
- D $8I$
