

- 6 Two horizontal metal plates are separated by distance  $d$  in a vacuum. A potential difference  $V$  is applied across the plates, as shown in Fig. 6.1.

**Fig. 6.1**

A horizontal beam of  $\alpha$ -particles from a radioactive source is made to pass between the plates.

- (a) State and explain the effect on the deflection of the  $\alpha$ -particles for each of the following changes:

- (i) The magnitude of  $V$  is increased.

.....  
..... [1]

- (ii) The separation  $d$  of the plates is decreased.

.....  
..... [1]

- (b) The source of  $\alpha$ -particles is replaced with a source of  $\beta$ -particles.  
Compare, with a reason in each case, the effect of each of the following properties on the deflections of  $\alpha$ - and  $\beta$ -particles in a uniform electric field:

(i) charge

.....  
.....  
.....[2]

(ii) mass

.....  
.....  
.....[2]

(iii) speed

.....  
.....  
.....[1]

- (c) The electric field gives rise to an acceleration of the  $\alpha$ -particles and the  $\beta$ -particles.  
Determine the ratio

$$\frac{\text{acceleration of the } \alpha\text{-particles}}{\text{acceleration of the } \beta\text{-particles}} .$$

ratio = .....[3]
