

- 10** Two blocks are at rest on a frictionless horizontal surface. One block is made of wood and the other block is made of steel.

A steel ball is fired horizontally with a speed v at the wooden block. The ball embeds itself in the block, and the ball and block move together after impact.

A second identical steel ball is fired horizontally with speed v at the steel block. The steel ball then rebounds back along its original path with speed $\frac{v}{2}$.

The wooden block and the steel block have equal mass.

Which statement about the blocks immediately after the collisions is correct?

- A** Both blocks must travel with the same speed.
 - B** The steel block must travel faster than the wooden block.
 - C** The wooden block must travel faster than the steel block.
 - D** The masses of the blocks and the steel ball are needed to determine which block travels faster.
- 11** Which diagram shows a couple formed by two forces, each of magnitude F , acting on a rod?
