

- 15** An air bubble in a tank of water is rising with constant velocity. The forces acting on the bubble are  $X$ ,  $Y$  and  $Z$  as shown.

What describes the three forces?

- A**  $Z$  is the viscous drag on the bubble,  $Y$  is the weight of the bubble,  $X$  is the upthrust on the bubble and  $X = Y + Z$ .
- B**  $Z$  is the viscous drag on the bubble,  $Y$  is the weight of the bubble,  $X$  is the upthrust on the bubble and  $X > Y + Z$ .
- C**  $Z$  is the weight of the bubble,  $Y$  is the viscous drag on the bubble,  $X$  is the upthrust on the bubble and  $X = Y + Z$ .
- D**  $Z$  is the weight of the bubble,  $Y$  is the viscous drag on the bubble,  $X$  is the upthrust on the bubble and  $X > Y + Z$ .
- 16** The diagrams represent systems of coplanar forces acting at a point. The lengths of the force vectors represent the magnitudes of the forces.

Which system of forces is in equilibrium?
