

- 7 (a) The spontaneous decay of polonium is shown by the nuclear equation

- (i) State the composition of the nucleus of X.

.....
..... [1]

- (ii) The nuclei X are emitted as radiation. State two properties of this radiation.

1.
.....
2.
..... [2]

- (b) The mass of the polonium (Po) nucleus is greater than the combined mass of the nuclei of lead (Pb) and X. a conservation law to explain qualitatively how this decay is possible.

.....
.....
..... [3]
