

- 10 A ball falls vertically and bounces on the ground.

The following statements are about the forces acting while the ball is in contact with the ground.

Which statement is correct?

- A The force that the ball exerts on the ground is always equal to the weight of the ball.
 - B The force that the ball exerts on the ground is always equal in magnitude and opposite in direction to the force the ground exerts on the ball.
 - C The force that the ball exerts on the ground is always less than the weight of the ball.
 - D The weight of the ball is always equal in magnitude and opposite in direction to the force that the ground exerts on the ball.
- 11 The diagram shows a situation just before a head-on collision. A lorry of mass 20 000 kg is travelling at 20.0 m s^{-1} towards a car of mass 900 kg travelling at 30.0 m s^{-1} towards the lorry.

What is the magnitude of the total momentum?

- A 373 kN s
 - B 427 kN s
 - C 3600 kN s
 - D 4410 kN s
- 12 An object, immersed in a liquid in a tank, experiences an upthrust.

What is the physical reason for this upthrust?

- A The density of the body differs from that of the liquid.
- B The density of the liquid increases with depth.
- C The pressure in the liquid increases with depth.
- D The value of g in the liquid increases with depth.
