8 A brick weighing 20 N rests on an inclined plane. The weight of the brick has a component of 10 N parallel with the plane. The brick also experiences a frictional force of 4 N.

What is the acceleration of the brick down the plane? Assume that the acceleration of free fall g is equal to $10\,\mathrm{m\,s^{-2}}$.

- **A** $0.3 \, \text{m s}^{-2}$
- **B** $0.8\,\mathrm{m\,s^{-2}}$
- $C 3.0 \,\mathrm{m\,s^{-2}}$
- **D** $8.0 \,\mathrm{m\,s^{-2}}$
- **9** The diagram shows two identical spheres X and Y.

Initially, X moves with speed *v* directly towards Y. Y is stationary. The spheres collide elastically.

What happens?

	Х	Υ
Α	moves with speed $\frac{1}{2}v$ to the right	moves with speed $\frac{1}{2}v$ to the right
В	moves with speed v to the left	remains stationary
С	moves with speed $\frac{1}{2}v$ to the left	moves with speed $\frac{1}{2}v$ to the right
D	stops	moves with speed v to the right
