- 27 What is an example of the diffraction of a wave?
 - A laser light travelling along an optic fibre
 - **B** light waves forming images on a cinema screen
 - **C** microwaves passing the edge of a metal plate
 - **D** sound waves diverging as they pass through air
- 28 When the light from two lamps falls on a screen, no interference pattern can be obtained.

Why is this?

- **A** The lamps are not point sources.
- **B** The lamps emit light of different amplitudes.
- **C** The light from the lamps is not coherent.
- **D** The light from the lamps is white.
- **29** A beam of light consists of two wavelengths of 436 nm and 654 nm. A diffraction grating of 5.00×10^5 lines m⁻¹ produces a diffraction pattern in which the second order of one of these wavelengths occurs at the same angle θ as the third order of the other wavelength.

What is the angle θ ?

- **A** 19.1°
- **B** 25.8°
- **C** 40.8°
- **D** 78.8°
- 30 Which diagram shows the electric field lines surrounding an isolated negative point charge?
