**5** A toy car travels on a circular track at a constant speed of  $0.50 \,\mathrm{m\,s^{-1}}$ . It passes a point on the track at time t = 0 and takes a time of  $40 \,\mathrm{s}$  to travel once around the track.

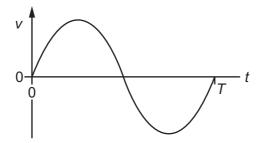

The magnitude of the average velocity of the car between t = 0 and t = 20 s is  $v_{20}$ .

The magnitude of the average velocity of the car between t = 0 and t = 40 s is  $v_{40}$ .

What are  $v_{20}$  and  $v_{40}$ ?

	$v_{20}/{\rm ms^{-1}}$	$v_{40}/{\rm ms}^{-1}$
Α	0.32	0
В	0.32	0.32
С	0.50	0
D	0.50	0.50

**6** The graph shows how the velocity v of an object moving in a straight line varies with time t from t = 0 to t = T.

Which graph could represent the displacement s of the object from time t = 0 to t = T?
