- 22 Which statement about elastic and plastic deformation is correct?
  - Elastic deformation and plastic deformation are proportional to the applied force.
  - Elastic deformation and plastic deformation cause no change in volume. В
  - C Elastic deformation causes heating of the material but plastic deformation does not.
  - Elastic deformation is reversible but plastic deformation is not.
- 23 What is meant by the *ultimate tensile stress* of a ductile metal?
  - It is the maximum stress at which the material deforms elastically.
  - В It is the maximum stress at which the material obeys Hooke's law.
  - C It is the maximum stress that the material can support without breaking.
  - D It is the Young modulus multiplied by the maximum possible strain of a material.
- 24 A 0.80 m length of steel wire and a 1.4 m length of brass wire are joined together. The combined wires are suspended from a fixed support and a force of 40 N is applied, as shown.

The Young modulus of steel is  $2.0 \times 10^{11}$  Pa.

The Young modulus of brass is  $1.0 \times 10^{11}$  Pa.

Each wire has a cross-sectional area of  $2.4 \times 10^{-6}$  m<sup>2</sup>.

The wires extend without reaching their elastic limits.

What is the total extension? Ignore the weights of the wires.

- **A**  $1.7 \times 10^{-4}$  m **B**  $3.0 \times 10^{-4}$  m **C**  $3.9 \times 10^{-4}$  m **D**  $9.0 \times 10^{-4}$  m
