13 The diagram shows an experiment to determine the force exerted on a ball by a horizontal air flow.

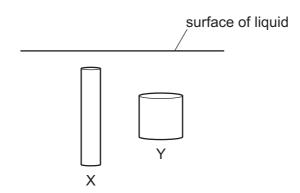

The ball is suspended by a light string and weighs 0.15 N.

The deflection of the string from vertical is 30°. The ball is in equilibrium.

What is the force on the ball from the air flow?

- **A** 0.075 N
- **B** 0.087 N
- **C** 0.26 N
- **D** 0.30 N
- **14** Two solid cylindrical objects X and Y are held fully submerged in a liquid, as shown.

The objects have the same volume. The density of the material of Y is twice the density of the material of X. Both objects are stationary.

Which statement is correct?

- **A** The force due to the liquid acting on the top surface of X is greater than that acting on the top surface of Y.
- **B** The pressure difference due to the liquid between the top and bottom surfaces of X is the same as that for Y.
- **C** The upthrust acting on X is the same as the upthrust acting on Y.
- **D** The weight of X is the same as the weight of Y.
