1 (a) State two SI base quantities other than mass, length and time.

1.

[2]

(b) A beam is clamped at one end and an object X is attached to the other end of the beam, as shown in Fig. 1.1.

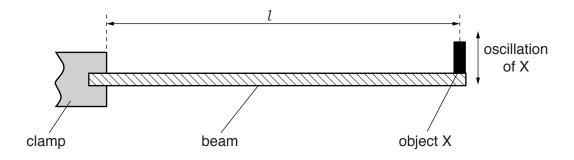

Fig. 1.1

The object X is made to oscillate vertically.

The time period *T* of the oscillations is given by

$$T = K \sqrt{\frac{Ml^3}{E}}$$

where M is the mass of X,

l is the length between the clamp and X,

E is the Young modulus of the material of the beam

and K is a constant.

(i) 1. Show that the SI base units of the Young modulus are $kg m^{-1} s^{-2}$.

2. [Determine	the	SI	base	units	of	K.
------	-----------	-----	----	------	-------	----	----

SI base units of K[2]

(ii) Data in SI units for the oscillations of X are shown in Fig. 1.2.

quantity	value	uncertainty
T	0.45	± 2.0%
l	0.892	± 0.2%
М	0.2068	± 0.1%
К	1.48 × 10 ⁵	± 1.5%

Fig. 1.2

Calculate E and its actual uncertainty.

 $E = \dots \pm \lim_{m \to \infty} \pm \lim_{m \to \infty} kg m^{-1} s^{-2} [4]$

2 The signal from a microwave detector is recorded on a cathode-ray oscilloscope (c.r.o.), as shown in Fig. 2.1.

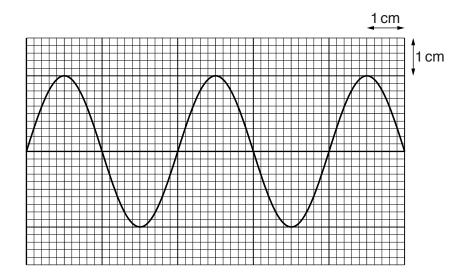

Fig. 2.1

The time-base setting on the c.r.o. is 50 ps cm⁻¹.

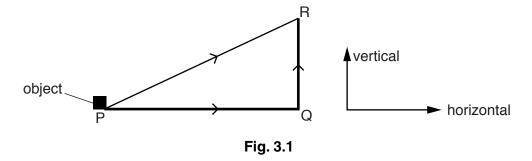

(a) Using Fig. 2.1, determine the wavelength of the microwaves.

(b) The signal from a radio wave detector is recorded on the same c.r.o. The wavelength of the radio waves is 1.5×10^3 m.

Determine the time-base setting required to display the same number of oscillations on the c.r.o. as shown in Fig. 2.1.

time-base setting =unit.........................[2]

3 (a) An object is moved from point P to point R either by a direct path or by the path P to Q to R, as shown in Fig. 3.1.

P and Q are on the same horizontal level. R is vertically above Q.

Explain whether the work done magnetic transport to the manual manuscript and PQI and	, ,	avitational field is the same of
		[2]

(b) A ball is thrown with an initial velocity V at an angle θ to the horizontal, as shown in Fig. 3.2.

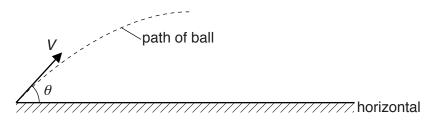

Fig. 3.2 (not to scale)

The variation with time *t* of the height *h* of the ball is shown in Fig. 3.3.

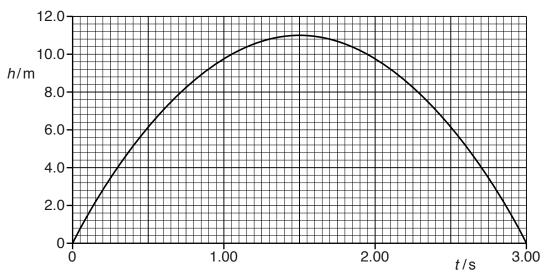

Fig. 3.3

Air resistance is negligible.

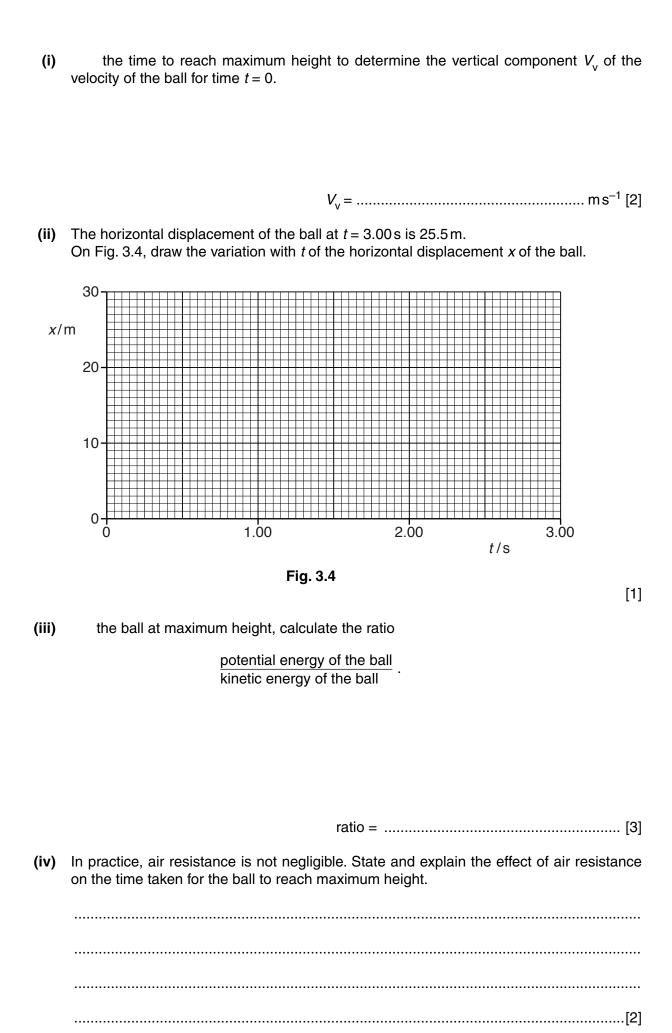

Fig. 4.1 shows a metal cylinder of height 4.5 cm and base area 24 cm².

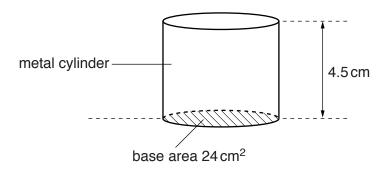

Fig. 4.1

The density of the metal is $7900\,\mathrm{kg}\,\mathrm{m}^{-3}$.

(a) Show that the mass of the cylinder is 0.85 kg.

(b) The cylinder is placed on a plank, as shown in Fig. 4.2.

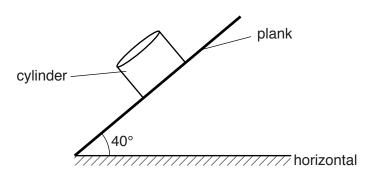

Fig. 4.2

The plank is at an angle of 40° to the horizontal.

[2]

	Calculate the pressure on the plank due to the cylinder.
	pressure = Pa [3]
(c)	The cylinder then slides down the plank with a constant acceleration of $3.8\mathrm{ms^{-2}}$. A constant frictional force f acts on the cylinder.
	Calculate the frictional force f.
	f = N [3]
	<i>τ</i> = Ν [5]

(iii) State and explain the change in the kinetic energy of a particle at an antinode be $t = 0$ and $t = 5.0 \text{ms}$. A numerical value is not required.	1	
The variation of the displacement <i>y</i> of particles of the string with distance <i>x</i> along the for the wave at time <i>t</i> = 0 is shown on Fig. 5.1. 10 position of particles at <i>t</i> = 0 Fig. 5.1 The wave has a period of 20ms and a wavelength of 1.2m. The maximum amplitude particles of the string is 5.0 mm. (i) On Fig. 5.1, draw a line to represent the position of the string at <i>t</i> = 5.0 ms. (ii) State the phase difference between the particles of the string at <i>x</i> = 0.40 m and at <i>x</i> = 0.80 m. phase difference =	2	
The variation of the displacement <i>y</i> of particles of the string with distance <i>x</i> along the for the wave at time <i>t</i> = 0 is shown on Fig. 5.1. 10	 (b) Ast	rationary wave is formed on a stretched string between two fixed points A and B
Fig. 5.1 The wave has a period of 20 ms and a wavelength of 1.2 m. The maximum amplitude particles of the string is 5.0 mm. (i) On Fig. 5.1, draw a line to represent the position of the string at $t = 5.0$ ms. (ii) State the phase difference between the particles of the string at $x = 0.40$ m and at $x = 0.80$ m. phase difference =	The	variation of the displacement y of particles of the string with distance x along the str
Fig. 5.1 The wave has a period of 20 ms and a wavelength of 1.2 m. The maximum amplitude particles of the string is 5.0 mm. (i) On Fig. 5.1, draw a line to represent the position of the string at $t = 5.0$ ms. (ii) State the phase difference between the particles of the string at $x = 0.40$ m and at $x = 0.80$ m. phase difference =		10
Fig. 5.1 The wave has a period of 20 ms and a wavelength of 1.2 m. The maximum amplitude particles of the string is 5.0 mm. (i) On Fig. 5.1, draw a line to represent the position of the string at $t = 5.0$ ms. (ii) State the phase difference between the particles of the string at $x = 0.40$ m and at $x = 0.80$ m. phase difference =		
Fig. 5.1 The wave has a period of 20 ms and a wavelength of 1.2 m. The maximum amplitude particles of the string is 5.0 mm. (i) On Fig. 5.1, draw a line to represent the position of the string at <i>t</i> = 5.0 ms. (ii) State the phase difference between the particles of the string at <i>x</i> = 0.40 m and at <i>x</i> = 0.80 m. phase difference =	/	
Fig. 5.1 The wave has a period of 20 ms and a wavelength of 1.2 m. The maximum amplitude particles of the string is 5.0 mm. (i) On Fig. 5.1, draw a line to represent the position of the string at <i>t</i> = 5.0 ms. (ii) State the phase difference between the particles of the string at <i>x</i> = 0.40 m and at <i>x</i> = 0.80 m. phase difference =	y/mn	A
Fig. 5.1 The wave has a period of 20 ms and a wavelength of 1.2 m. The maximum amplitude particles of the string is 5.0 mm. (i) On Fig. 5.1, draw a line to represent the position of the string at <i>t</i> = 5.0 ms. (ii) State the phase difference between the particles of the string at <i>x</i> = 0.40 m and at <i>x</i> = 0.80 m. phase difference =		
Fig. 5.1 The wave has a period of 20 ms and a wavelength of 1.2 m. The maximum amplitude particles of the string is 5.0 mm. (i) On Fig. 5.1, draw a line to represent the position of the string at <i>t</i> = 5.0 ms. (ii) State the phase difference between the particles of the string at <i>x</i> = 0.40 m and at <i>x</i> = 0.80 m. phase difference =		_5
Fig. 5.1 The wave has a period of 20 ms and a wavelength of 1.2 m. The maximum amplitude particles of the string is 5.0 mm. (i) On Fig. 5.1, draw a line to represent the position of the string at <i>t</i> = 5.0 ms. (ii) State the phase difference between the particles of the string at <i>x</i> = 0.40 m and at <i>x</i> = 0.80 m. phase difference =		
The wave has a period of 20 ms and a wavelength of 1.2 m. The maximum amplitude particles of the string is 5.0 mm. (i) On Fig. 5.1, draw a line to represent the position of the string at <i>t</i> = 5.0 ms. (ii) State the phase difference between the particles of the string at <i>x</i> = 0.40 m and at <i>x</i> = 0.80 m. phase difference =	_	.10
 (i) On Fig. 5.1, draw a line to represent the position of the string at t = 5.0 ms. (ii) State the phase difference between the particles of the string at x = 0.40 m and at x = 0.80 m. phase difference =		Fig. 5.1
 (ii) State the phase difference between the particles of the string at x = 0.40 m and at x = 0.80 m. phase difference =	2 (b) A s The for (i) (ii)	
at $x = 0.80 \text{m}$. phase difference =	(i)	On Fig. 5.1, draw a line to represent the position of the string at $t = 5.0 \mathrm{ms}$.
(iii) State and explain the change in the kinetic energy of a particle at an antinode be $t=0$ and $t=5.0\mathrm{ms}$. A numerical value is not required.	(ii)	
t = 0 and $t = 5.0$ ms. A numerical value is not required.		phase difference = unit unit
	(iii)	State and explain the change in the kinetic energy of a particle at an antinode betw $t = 0$ and $t = 5.0 \mathrm{ms}$. A numerical value is not required.

6	(a)	Define electromotive force (e.m.f.) for a battery.
		[1]
	(b)	A battery of e.m.f. 6.0V and internal resistance 0.50 Ω is connected in series with two resistors X and Y, as shown in Fig. 6.1.
		Fig. 6.1
		The resistance of X is 4.0Ω and the resistance of Y is 12Ω .
		Calculate
		(i) the current in the circuit,
		current = A [2]
		(ii) the terminal potential difference (p.d.) across the battery.
		p.d. =V [1]

(c) A resistor Z is now connected in parallel with resistor Y in the circuit in (b). The new arrangement is shown in Fig. 6.2.

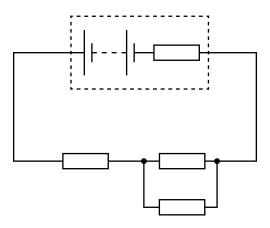

Fig. 6.2

Resistor Y is made from a wire of length l and diameter d. Resistor Z is a wire made from the same material as Y. The length of the wire for Z is l/2 and the diameter is d/2.

(i) Calculate the resistance *R* of the combination of resistors Y and Z.

$R = \dots \Omega$ [3]
State and explain the effect on the terminal p.d. across the battery.
A numerical value is not required.

(d) the circuits given in (b) and (c), show that the ratio

power developed in the external circuit in Fig. 6.1 power developed in the external circuit in Fig. 6.2

is approximately 0.8.

[3]

7 Two parallel, vertical metal plates in a vacuum are connected to a power supply and a switch, as shown in Fig. 7.1.

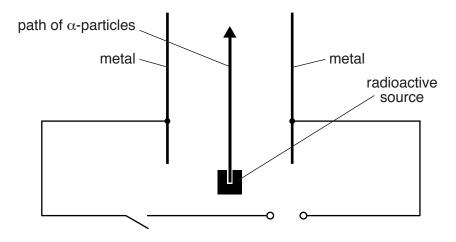

Fig. 7.1

A radioactive source emitting α -particles is placed below the plates. The path of the α -particles is shown on Fig. 7.1. The switch is closed producing a potential difference (p.d.) across the plates. This gives rise to a uniform electric field between the plates.

The separation of the plates is 12 mm.

(a)	(i)	On Fig. 7.1, draw the path of the α -particles.	[1]
	(ii)	Explain why the metal plates are placed in a vacuum.
