3	The	coefficient of x^4 in the expansion of $\left(2x^2 + \frac{k^2}{x}\right)^5$ is a. The coefficient of x^2 in the expansion of		
	$(2kx-1)^4 \text{ is } b.$			
	(a)	Find a and b in terms of the constant k . [3]		

(b)	Given that $a + b = 216$, find the possible values of k .
