23 Pollen grains are suspended in a liquid and are illuminated strongly. When observed under a microscope they are seen to be in continuous random motion.

What is the reason for this?

- convection currents in the liquid
- В evaporation of the liquid
- C molecules of the liquid colliding with the pollen grains
- pollen grains colliding with each other D
- 24 Why does the pressure increase when a sealed container of gas is heated?
  - The gas molecules collide more often with each other. Α
  - The gas molecules expand when they are heated. В
  - C The gas molecules travel faster and hit the walls of the container more often.
  - **D** There are more gas molecules present to collide with the walls of the container.
- **25** A metal cube of side l is placed in a vice and compressed elastically by two opposing forces F.

How will  $\Delta l$ , the amount of compression, relate to l?

- **A**  $\Delta l \propto \frac{1}{l^2}$  **B**  $\Delta l \propto \frac{1}{l}$  **C**  $\Delta l \propto l$  **D**  $\Delta l \propto l^2$
