5 Four different students use a ruler to measure the length of a 15.0 cm pencil. Their measurements are recorded on four different charts.

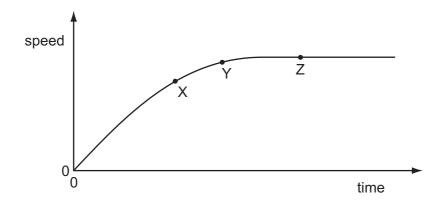

Which chart shows measurements that are precise but **not** accurate?

6 In a simple electrical circuit, the current in a resistor is measured as (2.50 ± 0.05) mA. The resistor is marked as having a value of $4.7\Omega \pm 2\%$.

If these values were used to calculate the power dissipated in the resistor, what would be the percentage uncertainty in the value obtained?

- **A** 2%
- **B** 4%
- **C** 6%
- **D** 8%
- 7 A raindrop falls vertically from rest in air. The variation with time of the speed of the raindrop is shown in the graph.

Which statement about the raindrop is correct?

- A At point X, the raindrop has an acceleration of 9.81 m s⁻².
- **B** At point Z, the force on the raindrop due to air resistance has reached its maximum value and so the acceleration of the raindrop has also reached its maximum value.
- **C** At point Z, the force due to air resistance is equal and opposite to the weight of the raindrop and so the speed of the raindrop is zero.
- **D** The resultant force on the raindrop at point Y is less than the resultant force on the raindrop at point X.
