1 (a) Mass, length and time are SI base quantities. State two other base quantities.

1.

2.

[2]

(b) A mass *m* is placed on the end of a spring that is hanging vertically, as shown in Fig. 1.1.

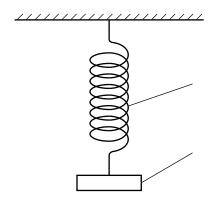

Fig. 1.1

The mass is made to oscillate vertically. The time period of the oscillations of the mass is *T*.

The period T is given by

$$T = C \sqrt{\frac{m}{k}}$$

where *C* is a constant and *k* is the spring constant.

Show that C has no units.

| 2 | (a) | Define | pressure. |
|---|-----|--------|-----------|
|---|-----|--------|-----------|

......[1

(b) A cylinder is placed on a horizontal surface, as shown in Fig. 2.1.

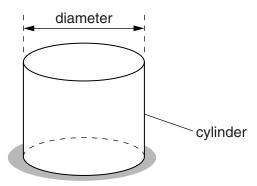

Fig. 2.1

The following measurements were made on the cylinder:

mass = $5.09 \pm 0.01 \text{ kg}$ diameter = $9.4 \pm 0.1 \text{ cm}$.

(i) Calculate the pressure produced by the cylinder on the surface.

(ii) Calculate the actual uncertainty in the pressure.

(iii) State the pressure, with its actual uncertainty.

3 The resistance R of a uniform metal wire is measured for different lengths l of the wire. The variation with l of R is shown in Fig. 3.1.

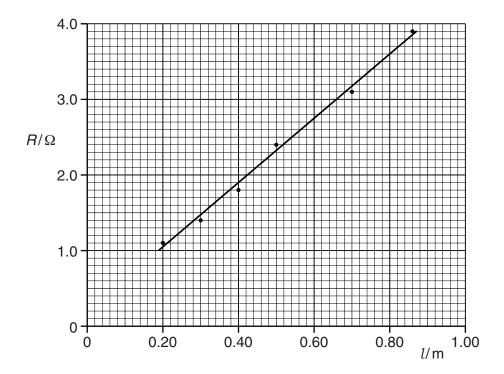

Fig. 3.1

| (a) | The points shown in | Fig. 3.1 do no | ot lie on the best-fit line. | Suggest a reason for t | his |
|-----|---------------------|------------------|-------------------------------|------------------------|------|

| ַן ד |
|------|

(b) Determine the gradient of the line shown in Fig. 3.1.

(c) The cross-sectional area of the wire is $0.12 \, \text{mm}^2$.

your answer in (b) to determine the resistivity of the metal of the wire.

(d) The resistance R of different wires is measured. The wires are of the same metal and same length but have different cross-sectional areas A.

On Fig. 3.2, sketch a graph to show the variation with A of R.

Fig. 3.2

[2]

4 A trolley moves down a slope, as shown in Fig. 4.1.

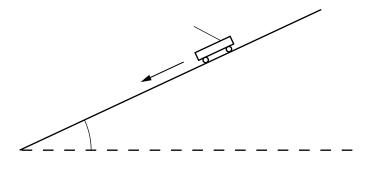

Fig. 4.1

The slope makes an angle of 25° with the horizontal. A constant resistive force $F_{\rm R}$ acts up the slope on the trolley.

At time t = 0, the trolley has velocity $v = 0.50 \,\mathrm{m\,s^{-1}}$ down the slope.

At time t = 4.0 s, $v = 12 \text{ m s}^{-1}$ down the slope.

(a) (i) Show that the acceleration of the trolley down the slope is approximately $3 \,\mathrm{m}\,\mathrm{s}^{-2}$.

[2]

(ii) Calculate the distance x moved by the trolley down the slope from time t = 0 to t = 4.0 s.

 $x = \dots m [2]$

(iii) On Fig. 4.2, sketch the variation with time t of distance x moved by the trolley.

5 A motor is used to move bricks vertically upwards, as shown in Fig. 5.1.

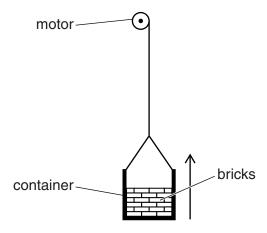

Fig. 5.1

The bricks start from rest and accelerate for 2.0s. The bricks then travel at a constant speed of 0.64 m s⁻¹ for 25 s. Finally the bricks are brought to rest in a further 3.0s.

The total mass of the bricks is 25 kg.

- (a) Determine the change in kinetic energy of the bricks
 - (i) in the first 2.0s,

(ii) in the next 25s,

(iii) in the final 3.0 s.

| (b) | The bricks are in a container. The weight of the container and bricks is 350 N. | | |
|-----|---|-------------------------------|--|
| | Calculate, for the lifting of the bricks and container when travelling at constant speed, | | |
| | (i) | the gain in potential energy, | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | energy gain = J [3] | |
| | (ii) | the power required. | |

| 7 | (a) | A cell with internal resistance supplies a current. Explain why the terminal potential difference (p.d.) is less than the electromotive force (e.m.f.) of the cell. |
| | | |
| | | |
| | | [1 |

(b) A battery of e.m.f. 12 V and internal resistance $0.50\,\Omega$ is connected to a variable resistor X and a resistor Y of constant resistance, as shown in Fig. 7.1.

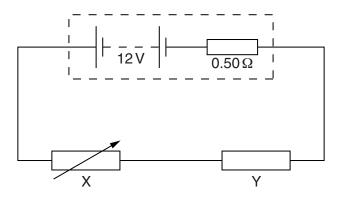

Fig. 7.1

The resistance R of X is increased from 2.0Ω to 16Ω . The variation with R of the current I in the circuit is shown in Fig. 7.2.

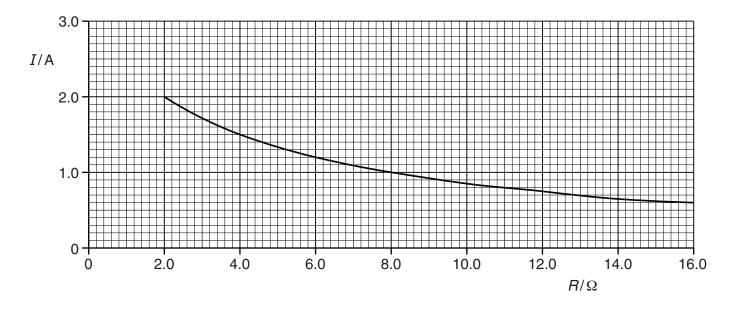

Fig. 7.2

| Calculate, | for | I = | 1.2 A, |
|------------|-----|-----|--------|
| | | | |

(i) the p.d. across X,

p.d. =V [2]

(ii) the resistance of Y,

resistance = Ω [3]

(iii) the power dissipated in the battery.

power =W [2]

(c) Fig. 7.2 to explain the variation in the terminal p.d. of the battery as the resistance *R* of X is increased.

(b) The arrangement of apparatus used to determine the wavelength of a sound wave is shown in Fig. 8.1.

Fig. 8.1

The loudspeaker emits sound of one frequency. The microphone is connected to a cathode-ray oscilloscope (c.r.o.).

The waveform obtained on the c.r.o. for one position of the microphone is shown in Fig. 8.2.

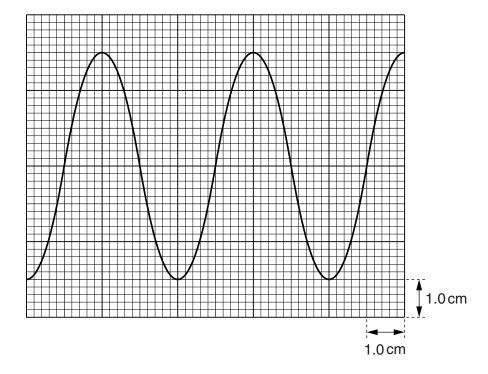

Fig. 8.2

| The time-base | setting of | the c.r.o. is | s 0.20 ms cm | ₁ –1 |
