**22** From the initial position of equilibrium shown, there is an increase in government expenditure on goods and services and simultaneously an increase in the costs of production of goods and services.

What best describes the likely impact on the economy?

|   | equilibrium level<br>of national income | equilibrium level<br>of prices |
|---|---|--------------------------------|
| Α | falls                                   | uncertain                      |
| В | no change                               | no change                      |
| С | rises                                   | rises                          |
| D | uncertain                               | rises                          |

23 The diagram shows a shift in an economy's aggregate demand curve from AD<sub>1</sub> to AD<sub>2</sub>.

What could **not** be a cause of the shift?

- A a decrease in income tax
- **B** a decrease in the price of goods
- **C** an increase in money wage rates
- **D** an increase in the money supply
