23 A police car travels at a velocity of 30.0 m s<sup>-1</sup> directly towards a stationary observer. The horn of the car emits sound of frequency 2000 Hz. The speed of sound is 340 m s<sup>-1</sup>.

What is the frequency of the sound heard by the observer?

- **A** 1840 Hz
- **B** 2000 Hz
- **C** 2180 Hz
- **D** 2190 Hz

**24** A vibrating tuning fork is held over a measuring cylinder, as shown.

Water is then gradually poured into the measuring cylinder. A much louder sound is first heard when the water level is 2.9 cm above the base of the measuring cylinder. A second much louder sound is heard when the water level reaches a height of 67.3 cm above the base.

The speed of sound in air is 330 m s<sup>-1</sup>.

What is the frequency of the tuning fork?

- **A** 128 Hz
- **B** 256 Hz
- **C** 512 Hz
- **D** 1024 Hz

25 A water wave in a ripple tank is diffracted as it passes through a gap in a barrier.

Which two factors affect the angle of diffraction of the wave?

- A the amplitude and frequency of the incident wave
- **B** the amplitude of the incident wave and the width of the gap
- **C** the wavelength and amplitude of the incident wave
- **D** the wavelength of the incident wave and the width of the gap

**26** A double-slit interference pattern using red light of wavelength  $7.0 \times 10^{-7}$  m has a fringe spacing of 3.5 mm.

Which fringe spacing would be observed for the same arrangement of apparatus but using blue light of wavelength  $4.5 \times 10^{-7} \, \text{m}$ ?

- **A** 2.3 mm
- **B** 3.5 mm
- **C** 5.4 mm
- **D** 9.0 mm
