10 The diagram shows three supply curves.

What can be concluded about the price elasticity of supply of the curves?

- ${\bf A}$  As price rises, the price elasticity of supply of  $S_2$  will increase.
- **B** At any price, the price elasticity of supply of  $S_1$  will be less than that of  $S_3$ .
- **C** At any price, the price elasticity of supply of S<sub>2</sub> will be higher than that of S<sub>3</sub>.
- **D** The price elasticity of supply of each curve is constant.
- 11 Demand for shoes increases which pushes up their price. Firm Y increases its supply more quickly than firm Z.

What would explain this difference in the speed of their responses?

- A Firm Y has limited stocks of unsold shoes whereas firm Z has plentiful stocks of unsold shoes.
- **B** Firm Y has spare capacity in its factories whereas firm Z's factories are working at full capacity.
- **C** Firm Y's shoes are handmade whereas firm Z's shoes are made by machine.
- **D** Firm Y's shoes need raw materials which are in short supply whereas firm Z's shoes need raw materials which are in plentiful supply.
