A particle of mass $m$ and charge $q$ is in a uniform electric field of strength $E$ . The particle has acceleration $a$ due to the field.			
(a)	Sho	ow that	$\frac{a}{n} = \frac{a}{E}$ .
			[2]
(b)		e particle has a charge of $4e$ where $1.5 \times 10^4  \text{V m}^{-1}$ . The acceleration of	<i>e</i> is the elementary charge. The electric field strength the particle is $1.5 \times 10^{12} \mathrm{ms^{-2}}$ .
		the expression in (a) to show that	the mass of the particle is 9.0 u.
