	$12\sin^2\theta - 7\sin\theta - 12 = 0.$	[3]
b)	Hence solve the equation $\frac{7 \tan \theta}{\cos \theta} + 12 = 0$ for $0^{\circ} \le \theta \le 360^{\circ}$.	[3]
b)	Hence solve the equation $\frac{7 \tan \theta}{\cos \theta} + 12 = 0$ for $0^{\circ} \le \theta \le 360^{\circ}$.	[3]
b)	Hence solve the equation $\frac{7 \tan \theta}{\cos \theta} + 12 = 0$ for $0^{\circ} \le \theta \le 360^{\circ}$.	[3]
b)	Hence solve the equation $\frac{7 \tan \theta}{\cos \theta} + 12 = 0$ for $0^{\circ} \le \theta \le 360^{\circ}$.	[3]
b)	Hence solve the equation $\frac{7 \tan \theta}{\cos \theta} + 12 = 0$ for $0^{\circ} \le \theta \le 360^{\circ}$.	[3]
b)	Hence solve the equation $\frac{7 \tan \theta}{\cos \theta} + 12 = 0$ for $0^{\circ} \le \theta \le 360^{\circ}$.
