28 In a two-source interference experiment, light of a single frequency is incident on a double slit.

The light waves emerging from the slits are coherent.

What is meant by coherent?

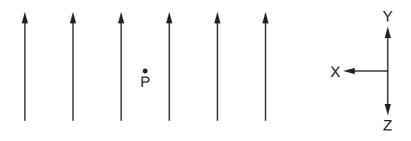

- A The waves are in phase.
- **B** The waves have a constant phase difference.
- **C** The waves have the same amplitude.
- **D** The waves interfere constructively wherever they overlap.
- 29 A parallel beam of light consists of light of wavelength 420 nm and light of wavelength 630 nm.

The light is incident normally on a diffraction grating.

The diffraction maxima for the two wavelengths overlap only at an angle of 31° from the direction of the incident light beam.

What could be the line spacing of the diffraction grating?

- **A** 1.2 μm
- **B** 1.6 μm
- **C** 2.4 μm
- D 3.7 μm
- **30** A positively charged particle P is in an electric field, as shown.

The field lines (lines of force) are evenly spaced and parallel.

Which statement is correct?

- A Moving P a small distance in any direction will not change the electric force on P.
- **B** Moving P a small distance in direction Y will increase the electric force on P.
- **C** Moving P a small distance in direction Z will increase the electric force on P.
- **D** Moving P a small distance in direction X will increase the electric force on P.
