(a)	Sta	te the principl	e of superpositi	on.				
							[2]	
(b)		ransmitter pro 4.1.	oduces microwa	aves that travel	in air toward	ds a metal plat	e, as shown in	
		microwave transmitter		microwave receiver		metal plate		
							_	
				X				
		Fig. 4.1						
	The microwaves have a wavelength of $0.040\mathrm{m}$ . A stationary wave is formed between the transmitter and the plate.							
	(i)	Explain the	function of the r	netal plate.				
							[1]	
	(ii) Calculate the frequency, in GHz, of the microwaves.							
				frequenc	cy =		GHz [3]	

(iii)	A microwave receiver is initially placed at position X where it detects an intensit minimum. The receiver is then slowly moved away from X directly towards the plate.					
	1.	Determine the shortest distance from X of the receiver when it detects another intensity minimum.				
		distance = m				
	uistance –					
	2. Determine the number of intensity maxima that are detected by the receiver as moves from X to a position that is 9.1 cm away from X.					
	number =
