1 (a) Define *density*.

....

.... [1]

(b) Explain how the difference in the densities of solids, liquids and gases may be related to the spacing of their molecules.

....

....

....

.... [2]

(c) A paving slab has a mass of 68 kg and dimensions 50 mm × 600 mm × 900 mm.

(i) Calculate the density, in $kg\,m^{-3}$, of the material from which the paving slab is made.

density = ... $kg\,m^{-3}$ [2]

(ii) Calculate the maximum pressure a slab could exert on the ground when resting on one of its surfaces.

pressure = ... Pa [3]

2 **(a)** Define the *torque* of a couple.

....

.... [2]

(b) A uniform rod of length 1.5 m and weight 2.4 N is shown in Fig. 2.1.
Fig. 2.1

The rod is supported on a pin passing through a hole in its centre. Ropes A and B provide equal and opposite forces of 8.0 N.

(i) Calculate the torque on the rod produced by ropes A and B.

torque = ... N m [1]

(ii) Discuss, briefly, whether the rod is in equilibrium.

....

....

....

.... [2]

(c) The rod in **(b)** is removed from the pin and supported by ropes A and B, as shown in Fig. 2.2.

Fig. 2.2

Rope A is now at point P 0.30 m from one end of the rod and rope B is at the other end.

(i) Calculate the tension in rope B.

tension in B = ... N [2]

(ii) Calculate the tension in rope A.

tension in A = ... N [1]

3 A ball is thrown against a vertical wall. The path of the ball is shown in Fig. 3.1.
Fig. 3.1 (not to scale)

The ball is thrown from S with an initial velocity of 15.0 m s⁻¹ at 60.0° to the horizontal. Assume that air resistance is negligible.

(a) the ball at S, calculate

   (i) its horizontal component of velocity,

   horizontal component of velocity = ... m s⁻¹ [1]

   (ii) its vertical component of velocity.

   vertical component of velocity = ... m s⁻¹ [1]

(b) The horizontal distance from S to the wall is 9.95 m. The ball hits the wall at P with a velocity that is at right angles to the wall. The ball rebounds to a point F that is 6.15 m from the wall.

   Using your answers in **(a)**,

   (i) calculate the vertical height gained by the ball when it travels from S to P,

   height = ... m [1]

(ii) show that the time taken for the ball to travel from S to P is 1.33 s,

[1]

(iii) show that the velocity of the ball immediately after rebounding from the wall is about 4.6 m s⁻¹.

[1]

(c) The mass of the ball is 60 × 10⁻³ kg.

(i) Calculate the change in momentum of the ball as it rebounds from the wall.

change in momentum = ... N s [2]

(ii) State and explain whether the collision is elastic or inelastic.

....

....

.... [1]

4 **(a)** Distinguish between *gravitational potential energy* and *electric potential energy*.

....

....

.... [2]

(b) A body of mass *m* moves vertically through a distance *h* near the Earth's surface.
the defining equation for work done to derive an expression for the gravitational potential
energy change of the body.

[2]

(c) Water flows down a stream from a reservoir and then causes a water wheel to rotate, as
shown in Fig. 4.1.

Fig. 4.1

As the water falls through a vertical height of 120 m, gravitational potential energy is
converted to different forms of energy, including kinetic energy of the water. At the water
wheel, the kinetic energy of the water is only 10% of its gravitational potential energy at
the reservoir.

(i) Show that the speed of the water as it reaches the wheel is $15 \, \text{m s}^{-1}$.

[2]

(ii) The rotating water wheel is used to produce 110 kW of electrical power. Calculate the mass of water flowing per second through the wheel, assuming that the production of electric energy from the kinetic energy of the water is 25% efficient.

mass of water per second = ... $kg\,s^{-1}$ [3]

5 **(a)** Define the *ohm*.

.... [1]

(b) Determine the SI base units of **resistivity**.

base units of resistivity = ... [3]

(c) A cell of e.m.f. 2.0 V and negligible internal resistance is connected to a variable resistor R and a metal wire, as shown in Fig. 5.1.

Fig. 5.1

The wire is 900 mm long and has an area of cross-section of $1.3 \times 10^{-7}\,\text{m}^2$. The resistance of the wire is $3.4\,\Omega$.

(i) Calculate the resistivity of the metal wire.

resistivity = ... [2]

(ii) The resistance of R may be varied between 0 and 1500 Ω.
Calculate the maximum potential difference (p.d.) and minimum p.d. possible across the wire.

maximum p.d. = ... V

minimum p.d. = ...V

[2]

(iii) Calculate the power transformed in the wire when the potential difference across the wire is 2.0 V.

power = ... W [2]

(d) Resistance R in **(c)** is now replaced with a different variable resistor Q. State the power transformed in Q, for Q having

(i) zero resistance,

power = ... W [1]

(ii) infinite resistance.

power = ... W [1]

6 (a) State Hooke's law.

....

.... [1]

**(b)** The variation with extension x of the force F for a spring A is shown in Fig. 6.1.

Fig. 6.1

The point L on the graph is the elastic limit of the spring.

(i) Describe the meaning of *elastic limit*.

....

....

.... [1]

(ii) Calculate the spring constant k_A for spring A.

$k_A = $ .... $N\,m^{-1}$ [1]

(iii) Calculate the work done in extending the spring with a force of 6.4 N.

work done = ... J [2]

(c) A second spring B of spring constant $2k_A$ is now joined to spring A, as shown in Fig. 6.2.

spring A

spring B

6.4 N

Fig. 6.2

A force of 6.4 N extends the combination of springs.

the combination of springs, calculate

(i) the total extension,

extension = ... m [1]

(ii) the spring constant.

spring constant = ... N m^{-1} [1]

7 **(a)** Two isotopes of the element uranium are $^{235}_{92}$U and $^{238}_{92}$U.

Explain the term *isotope*.

....

....

.. [2]

(b) **(i)** In a nuclear reaction, proton number and neutron number are conserved. Other than proton number and neutron number, state a quantity that is conserved in a nuclear reaction.

.... [1]

(ii) When a nucleus of uranium-235 absorbs a neutron, the following reaction may take place.

$$^{235}_{92}U + {}^a_b n \longrightarrow {}^{141}_x Ba + {}^y_{36} Kr + 3\ {}^a_b n$$

State the values of *a, b, x* and *y*.

$a =$ ....

$b =$ ....

$x =$ ....

$y =$ ....
[3]

(c) When the nucleus of $^{238}_{92}$U absorbs a neutron, the nucleus decays, emitting an α-particle. State the proton number and nucleon number of the nucleus that is formed as a result of the emission of the α-particle.

proton number = ...

nucleon number = ...
[2]
